

# **BLINKIT DATA ANALYSIS PROJECT**

**Data Analysis using Power BI, Excel & Power point**

**Prepared by: Arvind Sharma**

## 1. PROJECT OVERVIEW

This project focus on analyzing Blinkit grocery sales data by using Power Bi and Excel. The analysis provides insights into sales performance, outlet types, outlet locations, item categories, customer ratings and outlet establishment trends. The objectives are to identify important business trends and present them through an interactive dashboard.

## 2. PROJECT OBJECTIVES

- ❖ Analyze overall sales performance
- ❖ Compare sales across different outlet types
- ❖ Analyze sales by outlet location and size
- ❖ Analyze customer ratings and item performance
- ❖ Identify top-performing item categories
- ❖ Analyze the outlet establishment trends over the years
- ❖ To give key insights through interactive Power BI dashboard

## 3. DATA & TOOLS USED:

### Data Source

- ❖ Blinkit Grocery Sales dataset (Excel)

### Tools Used:

- ❖ Power Query Editor – Data cleaning, transformation and analysis
- ❖ Power BI – Interactive dashboard and data visualization
- ❖ Microsoft excel – Raw data
- ❖ Microsoft PowerPoint – Project presentation

## 4. DATA CLEANING & TRANSFORMATION:

- ❖ Standardized item fat content values
- ❖ Cleaned item weight data
- ❖ Corrected data types

## 5. DATA MODEL & DAX MEASURES:

### Data Model

The Blinkit dataset was prepared and transformed using power query editor and used for analysis and dashboard development in Power BI.

### DAX Measures Created:

- ❖ **Total Sales**
- ❖ **Average Sales**
- ❖ **Average Rating**
- ❖ **Number of items**

## 6. DASHBOARD & VISUALIZATION:

The interactive Power BI dashboard was developed to provide a clear view of Blinkit's sales performance and outlet-level analysis.

### Key Dashboard Components:

- ❖ **KPI Cards:** Total Sales, Average Sales, Number of Items and Average Rating.
- ❖ **Sales by Fat Content:** Analyzes sales contribution of Low Fat and Regular products.

- ❖ **Sales by Item Type:** Compares sales performance across different product categories.
- ❖ **Sales by Outlet Establishment Year:** Shows the sales trend based on the outlet establishment year.
- ❖ **Sales by Outlet Size:** Compares sales across different outlet sizes.
- ❖ **Sales by Outlet Location:** Analyzes sales across Tier 1, Tier 2 and Tier 3 locations.
- ❖ **Outlet Type Analysis:** Provides key metrics across different outlet type.

## 7. KEY INSIGHTS:

The dashboard provides several insights into sales performance across products, outlet characteristics, and locations. The following observations were identified from the analysis

### ❖ Overall Performance

- Total sales generated were \$1.20M, with an average sales value of 140.99.
- The overall average customer rating was 3.92, indicating a moderate customer satisfaction level.
- The dataset contains approximately 8.5K items.

### ❖ Outlet Performance

- Supermarket Type1 generated the highest sales of approximately \$787.55K.
- Tier 3 outlets contributed the highest sales at approximately \$472.13K, followed by Tier 2 (\$393.15K) and Tier 1 (\$336.40K).

### ❖ Item & Fat Content

- Fruits and Vegetables and Snack Foods were among the highest-selling item categories, each contributing around \$0.18M.
- Regular-fat products contributed approximately \$776.32K (64.6%), while Low-Fat products contributed around \$425.36K (35.4%).

### ❖ Establishment Trend

- Outlet sales peaked around 2018, reaching approximately \$205K.
- Sales declined after 2018 and remained around \$129K–\$131K in 2020–2022.
